

Print in CMYW or CMYK - the Choice is Yours

The OKI Pro8432WT offers the ability to switch between printing with white to printing with true black.¹

The already remarkable OKI Pro8432WT, vibrant colour + brilliant white, can now be equipped to incorporate true black, allowing the same printer to cost effectively produce both dark and light transfers, and more!

Benefits of switchable black & white toner technology

- ✓ Black toner expands use of OKI Pro8432WT
- ✓ One printer to cost effectively print creative designs on dark and light garments and merchandise
- ✓ Good black quality with true black on light transfers
- ✓ Black toner delivers true black cost efficiently

Black toner delivers true black cost efficiently

With black installed in place of white, you can produce rich blacks (CMY+K) for transfers onto light materials or use true black to produce sharp text and graphics. Furthermore, using black toner can be a cost saving compared to mixing Cyan, Magenta and Yellow to represent black.

How to get started

The Switchable Toner technology is available for all existing and new Pro8432WT printers. Customers simply need to:

- 1 Purchase a new black toner and image drum for the OKI Pro8432WT. Additional instructions are included.
- 2 Download and install new colour and media profiles onto the OKI Pro8432WT. This is a one time process.

- 3 Begin printing jobs with black toner by setting the OKI Pro8432WT print properties (printer driver) to use the profiles that incorporate black toner.

Use the following URL/link to download the utilities to install new colour profiles and custom media files for using black toner on the OKI Pro8432WT.
